

After the submission: use case 3 and *the office's own view*.

Built on the development branch as v0.4.0. Held back from production while the assessment runs, on purpose.

After review, the case goes on site, and questions come back as rounds.

UNDER REVIEW, FROM v0.3.0 →

ANOTHER ROUND, AS MANY AS NEEDED

● built in v0.3.0 ○ new in v0.4.0 ● decision The five post-site statuses were already in v0.3.0's state machine; v0.4.0 built the screens and rules behind them, every move audited.

The date is agreed inside the case, not over email, and every round is on record.

OFFICER · PROPOSES

Tue 29 Sep · morning

Reply by Thu 24 Sep

OPERATOR · COUNTERS

Wed 30 Sep · afternoon

"The chef is away on Tuesday."

OFFICER · ACCEPTS

Confirmed: Wed 30 Sep · afternoon

Either side can reschedule later, with a reason

RULES THE SERVER ENFORCES

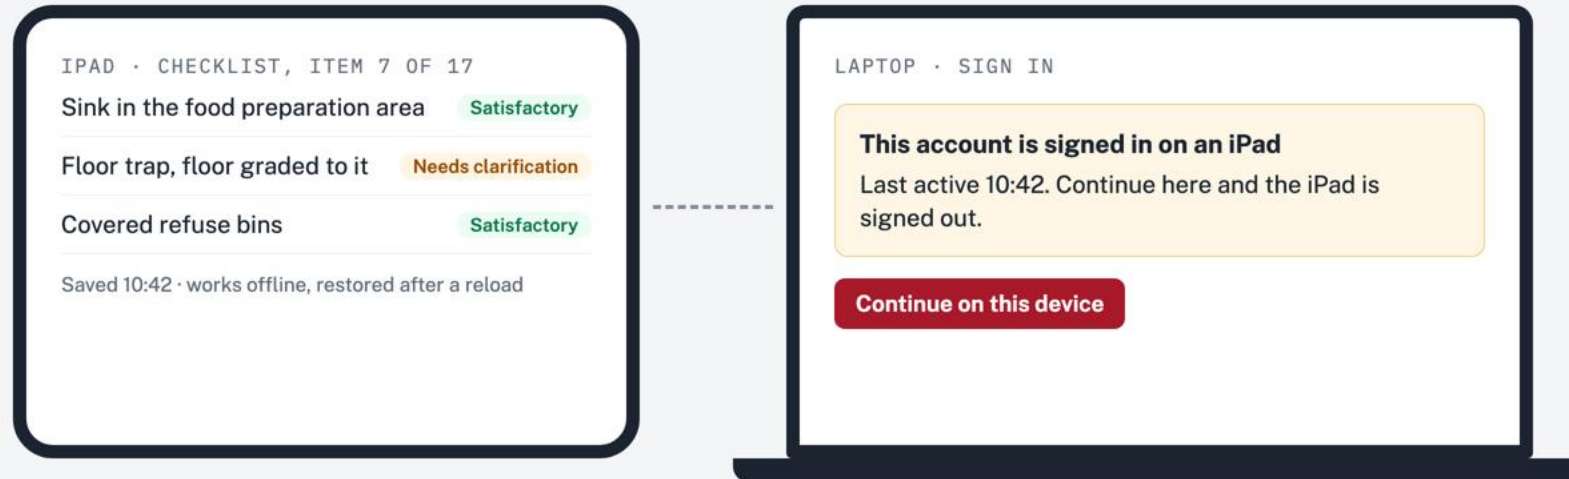

Mon–Fri Weekdays only, at least one working day ahead, within 60 days

3 days Three working days to reply, never after the visit itself

6 Proposals per visit at most, so it cannot bounce forever

SGT Every date in Singapore time, tested around midnight

The officer starts on the iPad and finishes on the laptop. Nothing is lost.

One live session per account

Autosave that can't double-save

Each save carries an id; a retried save is recognised, not repeated

Poor connection

"Waiting for the connection", then saved once online

Photos without camera data

Location and device details stripped on upload

Built for fingers

44 px targets; keyboard-only checklist tested

The office can see itself: what is stuck, whether the checks are healthy, who has access.

Admin · read-only on cases

officer

Idle more than 7 days:

the ten oldest cases, so nothing is forgotten. Document checks today, their failures and speed, against the daily quota.

ACTIVITY · EVERY CHANGE, NEWEST FIRST

10:42 · officer

Checklist submitted, 2 items flagged

10:15 · operator

Answered the storage question, 1 photo

09:58 · admin

Changed a user's role to officer

09:31 · officer

Approved, licence FEL-2026-000010

Users

Create accounts, change roles, deactivate. Takes effect on the next request.

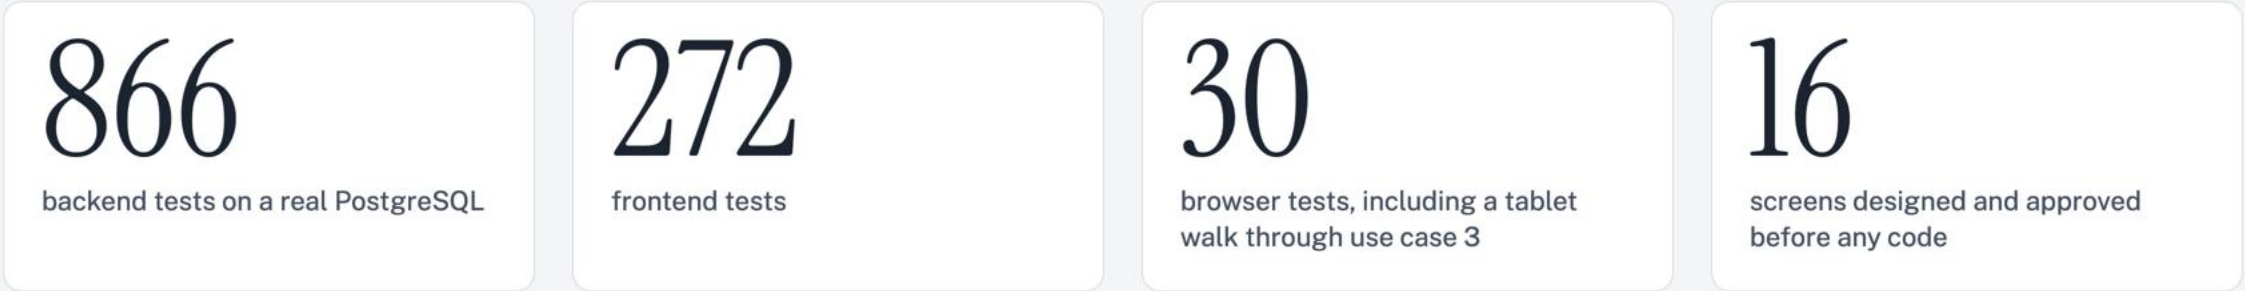

Guard rails

No admin can change themselves, remove the last admin, or touch a protected account.

Oversight, not action

Admins read any case; only officers decide. Every admin change is audited.

Built the same way as v0.3.0: design first, tested, and tried by hand on two devices.

ACCEPTANCE RUNS BY HAND, ON THE LIVE DEVELOPMENT SITE

RUN 4 · 21 SEP	Use case 3 twice, on an iPad and a laptop: 3 findings, all fixed the same day
RUN 5 · 24 SEP	Every script with the live model: 20 findings, 4 of them bugs
RUN 6 · 24 SEP	Every failed case re-tested after the fixes: pass

WHERE IT IS

- On dev, deployed to the development site
- Production stays on v0.3.0, the submitted version

Released after the assessment, on my go.
